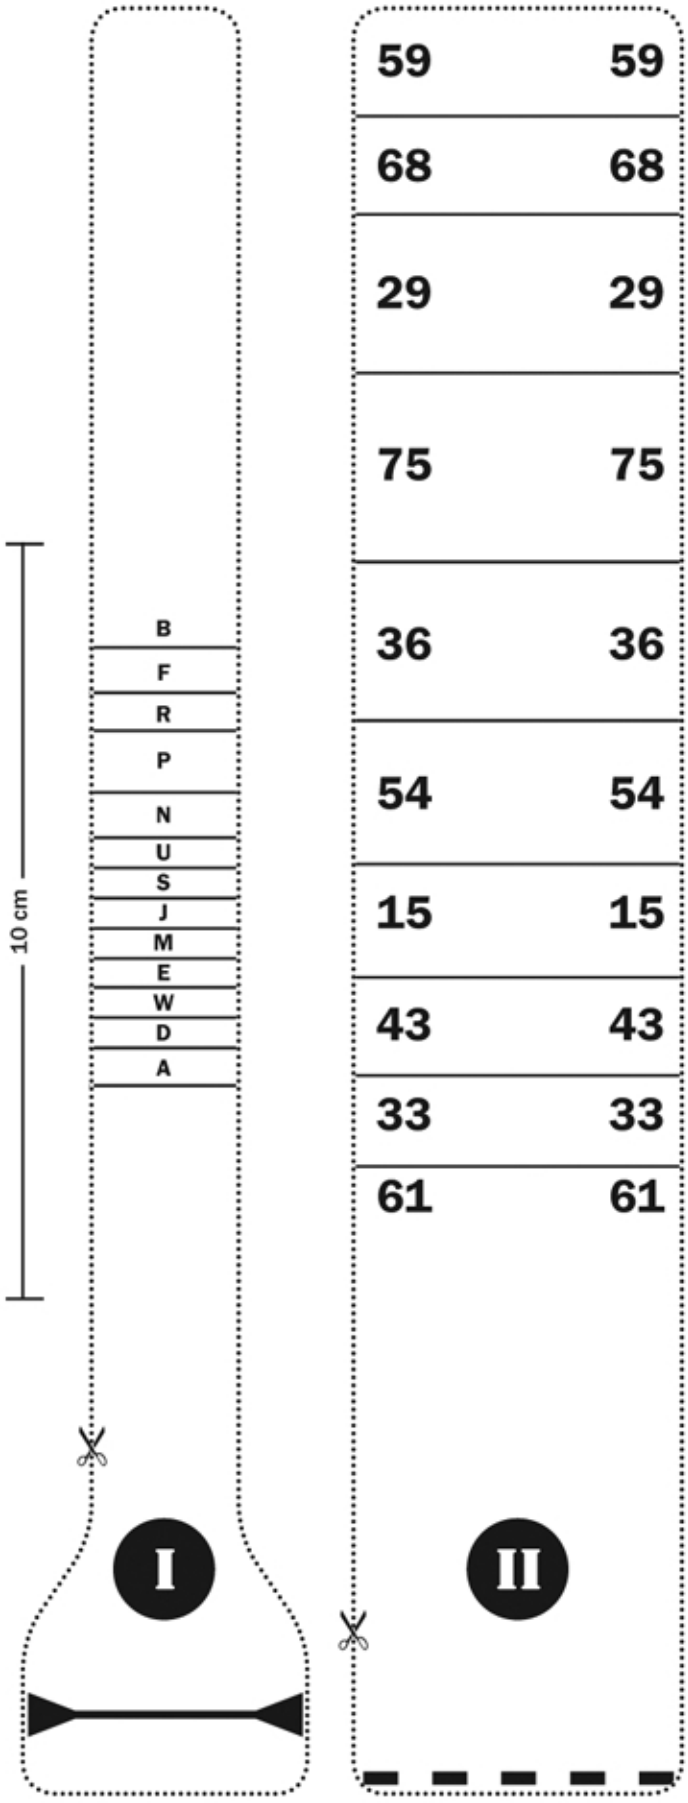
coripa

Measurement Pattern

Before using Coripa condoms the first time you have to determine your recommended condom size. Please follow the instructions below:



1ST STEP

Please cut out the two patterns along the dotted line.

Determine the breadth of your penis using **pattern I**. For this, you place the pattern around the middle of your erected penis and read off the letter code at the arrow marker.

2ND STEP

Determine the length of your penis using **pattern II**. For this, you keep the pattern underneath your erected penis. Pay attention to hold the dashed line at that point up to where you can unroll the condom. Read off the numerical code at the top of the glans.

3RD STEP

When combining the letter code and the numerical code you receive the recommended personal Coripa condom size (e.g. 15M).

The table below shows all available Coripa condom sizes.

In case your recommended condom size is not available, please advise us and select the next appropriate condom size.

REMARK:

For most customers, the recommended condom size provides for the ideal fit of the condom. However, it may occur that in individual cases the size has to be corrected slightly. Therefore, please pay attention to a proper fit of the condom when using it.

ATTENTION: Please pay attention to sharp cutting edges during the application!
